

ENERGY POLICY

To be recognized as benchmark for energy performance among power plants by implementing a robust Energy Management & Conservation system

To Support Vision of Energy Policy, Engro Powergen Thar Limited will continually Improve and:

- Comply with applicable local and international regulations and strive to adopt practices including technologies that will improve the energy performance of plant through effective management of energy during operations
- Provide framework for setting and reviewing energy conservation targets and ensure availability of required resources to meet them
- Fostering and spreading a culture of energy management through effective participation of employees and other stakeholders
- Establish and periodically review energy management objectives and targets that contribute for continuous improvement and promotion of energy saving
- Monitor and economize the cost of energy through analytics-based Energy Information Management System
- Enhance energy efficiency by using efficient products and services during design, engineering, procurement, and maintenance activities, wherever economically and technically feasible and environmentally viable
- Drives energy conservation orientation at all levels within the organization through capacity building, employee training, engagement, and process ownership
